---

Projects

Game-Application

- Created a full-stack application that uses multiple technologies including node.js, express.js, handlebars.js, mysql2, and sequelize
- Uses socket.io to create a connection between two users and play a game against each other
- Allows users to create an account/login and have a personalized avatar per user account.

MVC-Tech-Blog

- Created a CMS-style blog site that allows users to create an account, publish articles, and add comments
- Added a personal dashboard for users that allows them to audit their posts and delete
